Ordered by..... for **4X4 FEST 2019** Assembled in the Fair Complex of Marina di Carrara Pav. Aisle Stand Viale Colombo, in a building used for: other uses

HEREBY CERTIFIES

In his/her own responsibility, that the equipment has been executed in compliance with professional standards pursuant to art. 6, in view of the working conditions and the uses for which the building has been intended, and that he/she has, in particular:

- adhered to the design, according to art. 5 from (*2);
- adhered to the applicable technical regulations (*3);
- installed professionally manufactured components and materials, fit for the place of installation (Art. 5 e 6);
- inspected the equipment for safety and functions and found the equipment in order, after carrying out the inspections required by the applicable regulations and legal provisions;

Mandatory annexes:

- Design according to arts. 5 and 7 (*4)
- Report, with types of materials used(*5);
- Diagram of the equipment (*6);
- Reference to earlier or partial statements of compliance (*7);
- Copy of certificate of fulfilment of technical and professional requirements;
- optional documents attached (*8)

* see the legend on the next page.

AND ACCEPTS

no responsibility for any damage or injury resulting from any third party's tampering with the equipment or poor maintenance or repair of the equipment. The responsibility of the client or the owner is laid out in arts. 8 and 9 of M.D. 37/08.

The Exhibitors are kindly requested to submit to the IMM Carrara Spa Technical Department all documents concerning the materials used to fit out the stands by October 9th 2019, 10 a.m. so that such documents can be made available to the relevant authorities during their inspection.

The filling in and signing of this form shall not relieve the Exhibitor of any liability for his/her equipment.

Date..... The qualified professional.....

Legend:

- 1) as for example in the case of gas appliance installations, “other” may be used to mean the replacement of an appliance installed as a permanent appliance.
- 2) Indicate: name, surname, role and, when necessary according to art. 5, paragraph 3, details or registration on the professional roll of the technician who has drawn up the project.
- 3) Quote the technical and legal regulation/s, making a distinction as to those referring to design, execution and testing.
- 4) Should the installation on the plan be changed during its execution, the plan presented upon termination of the work must include the variations made during execution. Quoting the fire prevention documentation (where required) is part of the project.
- 5) For products subject to regulations, the report shall contain the declaration of compliance with these, completed, where existing, with reference to marks, test certificates, etc. issued by the authorised bodies. For the other products (to be listed), the signee must declare that they are materials, products and components that conform to what is laid out in arts. 5 and 6. The report must declare the suitability for the installation environment. If relevant to the correct working of the installation, indications must be given as to the number and characteristics of the appliances installed or installable (for example in the case of gas: 1) number, type and power of the appliances; 2) characteristics of the components of the ventilations system for the environment; 3) characteristics of the disposal system for the combustion products; 4) indications regarding the electrical connection of the appliances, where foreseen).
- 6) The plan of the installation completed means the description of the work carried out (it is sufficient to refer to the plan when this has been written by a qualified technician and there have been no variations to such plan during execution). In the case of transformation, extension or special maintenance, this must be included, if possible, on the plan of the existing installation. The plan shall quote the fire prevention documentation (where requested).
- 7) The references include the name of the executing company and the date of the declaration. For installations of parts of installations built before this decree came into force, reference to declarations of conformity may be replaced by reference to declarations of correspondence (arts. 7, c. 6). If part of the installation has been prepared by another company, for example ventilation and fumes disposal in gas installations, the declaration must include the same references for these parts.
- 8) Example: any certificates of the results of tests carried out on the installation before its operation or treatment for cleaning, disinfection, etc.
- 9) Upon termination of the work, the installing company is required to issue the client with a declaration of conformity of the installation in accordance with the regulations set out in art. 7. The client or owner is required to commission the work for the installation, transformation, extension and maintenance of the appliances installation as referred to in art. 1 to companies qualified in accordance with art. 3.

Utility connections

IMM Carrara Spa will supply the Exhibitor with special devices, of the type described at art. 7 of the General Regulations, for the connection of the exhibitors' electric utilities. Such utilities shall be executed pursuant to CEI 64-8 Standards (electric utilities), PD 547 dated 27.04.1955 (Industrial accident-prevention regulations), Fire-Prevention Regulations for Exhibitions and Fairs (CEI 64-50, Memo no. 16/951 - RD 07/11/1942 no. 1564 - Memo no. 79 dated 27/08/1971), MD 19/08/1996, PD 12/01/1998 no. 37, Interdepartmental Decree 10/03/1998 of Decree 81/08 (consolidation act on work health and safety). The electric system shall be executed and certified by a qualified installer pursuant to D.M. 37/08.

If the electric system is found to differ from the above standards or the submitted plan, IMM Carrara Spa will stop supplying power until the Exhibitor makes it comply with the prescribed standards. In addition, the officially appointed electrician shall also disconnect those regularly connected electric systems which have been tampered with or altered. The system cannot be altered without the qualified technician's authorisation.

The qualified technician shall be responsible for the electric system to all legal, juridical and technical intents and purposes.

The above-mentioned regulations shall also apply to the connection of electric equipment installed outside the halls.

The Exhibitors shall inspect in due time the location of the points of connection of the fair complex utilities, in order to timely prearrange the utilities in their stands without damaging or disrupting the fittings of the neighbouring exhibitors.

Electric utilities for the stands

M.D. n° 37 dated 22 January 2008.

According to the Technical Service of the Local Health Unit at the Supervisory Unit of the Prefecture of Massa Carrara, such regulations also apply to the electric utilities installed in individual stands.

Therefore, a certificate of compliance issued by the electrician or qualified company that installed the utility shall be submitted for any stand connected to an electric utility (including low-voltage ones).

The wiring diagram of the electric utility, a report with the type of materials used and copy of the certificate of fulfilment of the technical and professional requirements shall be enclosed with the certification of compliance.

Supply and delivery warranty

IMM Carrara Spa will provide warranties on the power supply as it receives them from the manufacturers, distributors or agents of such supply and will not take on any responsibility in this respect. In particular, IMM Carrara Spa will not be held responsible for any utility outage or breakdown.

N.B. : the certificates shall be given to the supervisory units
